Half-EBX Microbox Chassis

EMAC, has a number of chassis for housing Half-EBX, 3.5" SBCs. All of these chassis have punchouts for serial, ethernet and video ports. However, the different coast lines of some SBC require that a unique chassis be constructed.

The EB-20x PC chassis are an ideal case for system integrators using Half-EBX form factor Single Board Computers.

The Triple Height chassis allows for up to two PC/104 module in addition to an internal hard drive.

The chassis listed on this page do not work for all 3.5" Half-EBX SBCs. Please contact EMAC to determine what SBCs are supported by these chassis.
